PROFESSIONAL SUMMARY

Blockchain Developer with **3+ years of experience** in smart contract development, DeFi protocols, and full-stack Web3 applications. Architected a production-grade **cross-border remittance platform (SafarPay)** combining off-chain custodial ledgers with on-chain treasury settlement — Wise's business model with public blockchain auditability. Deployed secure, gas-optimized solutions across Ethereum, BSC, Polygon, and Arbitrum with **zero critical vulnerabilities** across 15+ production deployments.

CORE COMPETENCIES

Blockchain	Ethereum, BSC, Polygon, Arbitrum, Optimism, Sepolia
Smart Contracts	Solidity 0.8.x, ERC-20/721/1155/3643/5192, UUPS Proxy, OpenZeppelin, Foundry
DeFi & Web3	Uniswap, Aave, Compound, AMM, Chainlink, CCIP, Ethers.js, Wagmi
Fintech Architecture	Off-chain ledgers, custodial wallets, treasury settlement, PSP integrations, KYC/AML compliance
Frontend	React 19, React Native (Expo SDK 55), Next.js, TypeScript, Vite, Redux, Tailwind, NativeWind
Backend & Real-time	Node.js, Express, Prisma, PostgreSQL, MongoDB, Redis, WebSocket (Socket.io), JWT
Tools & Infra	Hardhat, Foundry, IPFS, The Graph, Git, Docker, Etherscan/Polygonscan verification

PROFESSIONAL EXPERIENCE

Smart Contract Engineer | **AspirexLLC** 2025 - Present

Contract-Based | Remote

- Deployed **ERC-3643 RWA tokenization platform** with 12 contracts on Arbitrum mainnet (escrow, marketplace, KYC, compliance)
- Built **Soulbound NFT (ERC-5192)** credential verification system with AI-powered certificate validation on Sepolia
- Architected **P2P DeFi lending platform** — Solidity contracts, React Native app, Node.js backend, MongoDB
- Developed cross-platform **Monero wallet** in React Native with stealth addresses and encrypted storage
- Created **multi-chain DeFi yield aggregator** with automated strategy optimization across Ethereum, BSC, and Polygon
- Built supply chain tracking DApp with Ethereum smart contracts and AI-powered delay prediction

Blockchain Developer | **Deep Ring Technologies** 2024 - 2025

Full-Time | Onsite

- Architected **multi-chain DeFi protocols** across Ethereum, BSC, and Polygon with 99.9% uptime
- Built **cross-chain bridge** and L2 scaling solutions, reducing transaction costs by 85%
- Developed **yield optimization contracts** managing \$2M+ TVL with advanced security patterns
- Created multi-chain **DEX aggregator** with 40+ protocol integrations

Full-Time

- Designed **15+ production smart contracts** with gas optimization achieving 30–40% cost reductions
- Built React DApp frontends with Web3 integration and EIP-2612 permit functionality
- Developed **custom tokenomics** with deflationary mechanisms and reward distribution systems
- Processed **10,000+ transactions** with zero critical vulnerabilities across multi-chain deployments

FEATURED BLOCKCHAIN PROJECTS

SafarPay — Cross-Border Remittance Platform (UAE ↔ Pakistan) ★ FEATURED

Solidity 0.8.28 • Foundry • React Native (Expo) • React 19 • Node.js + Prisma + PostgreSQL • Redis • WebSocket • Sepolia (Polygon-ready)

- Built **investor-grade fintech platform solo in 4 months** — 6 deployed smart contracts, full mobile app, admin operations dashboard, WebSocket-driven backend
- Architected **hybrid off-chain customer flow + on-chain treasury settlement** (Wise-style with public blockchain audit trail) — customer transfers ~50 ms with zero gas; cross-border value settles in batched USDT transfers (~\$0.05 vs SWIFT \$30)
- Designed **atomic dual-pool fiat ledger** (FiatBalance + FiatTransaction) handling Add Funds, internal transfers, and Cashout flows with `prisma.$transaction` guarantees
- Deployed contracts: **SafarPayAdmin** (role registry + pause), **UserRegistry** (KYC state machine), **FeeManager** (1% / 5% cap), **RateOracle** (Chainlink-style with staleness checks), **RemittanceEscrow** (high-value path) — all verified on Etherscan
- Built **treasury dashboard with auto-rebalance hints** — fires when pool USDT drops below 60% of projected 24-hour outflow; one-click on-chain settlement with Polygonscan-linked history
- Implemented **friendly error mapping** translating 13+ ethers revert patterns into user-actionable dialogs; eliminated raw transaction dumps from mobile UI
- Engineered **branded UI system** — animated SafarPayLoader (SVG coin animation), EmptyState, PageHero with logomark, bank-grade transaction receipt with PDF export
- 6 mobile tabs (Home, Send, Cashout, History, Notifications, Profile) and 8 admin pages (Dashboard, KYC, Transactions, Users, Staff, Fiat Ledger, Treasury, Notifications); 4-doc investor pitch package

MiniAMM — Decentralized Exchange (Uniswap V2-Style AMM)

Solidity • Foundry • React • Vite • Ethers.js • Sepolia

- Full AMM DEX with Factory, Router, and Pair contracts using constant product formula ($x \cdot y = k$)
- Admin dashboard with real-time pool analytics, token faucet, slippage protection, and multi-hop routing
- Security audited via Slither with zero critical vulnerabilities and 95%+ Foundry test coverage

MedChain AI — Decentralized Healthcare Platform

Solidity • Node.js • React • React Native • MongoDB • Sepolia

- 6 smart contracts, 35+ APIs, React admin panel, and React Native mobile app with blockchain-verified records
- Atomic on-chain/off-chain sync, multi-provider AI chat with fallback, and role-based access control

RWA Tokenization Platform

Solidity • ERC-3643 • Arbitrum Mainnet • React • Hardhat

- Enterprise-grade tokenization with 12 contracts — IdentityRegistry, KYCRegistry, compliance, escrow marketplace

P2P DeFi Lending Platform

Solidity • React Native • Node.js • MongoDB • Ethers.js • Sepolia

- Full-stack lending with smart contract escrow, collateral management, automated liquidation, and WalletConnect

Monero Wallet Mobile App

React Native • TypeScript • Node.js • SQLCipher

- Privacy-focused wallet with background sync, stealth addresses, encrypted storage, and cross-platform support

DeFi Analytics & Trading Platform

Solidity • Web3.js • React • TypeScript • The Graph

- Liquidity pool analytics across 5 chains with automated rebalancing and \$500K+ trading volume processed

Cross-Chain NFT Bridge

Solidity • Chainlink CCIP • React • IPFS

- Ethereum-Polygon NFT bridge with Merkle verification, zero audit findings, 99.8% success rate

Decentralized Lending Protocol

Solidity • Compound Fork • Chainlink Oracles • GraphQL

- Over-collateralized lending with dynamic rates, Chainlink feeds, flash loans, \$1.2M+ TVL managed

EDUCATION

Bachelor of Computer Science (BSCS)

2020 - 2024

Riphah International University, Lahore, Pakistan
